Re: Permit Application No. 02JE0669L - 903 Pad Remediation

Dear Andrew:

The Air Pollution Control Division (the Division) received and reviewed your emission permit application for the following source located at the Rocky Flats Technology Site in Section 2, R70W, T25, Golden, Jefferson County, Colorado:

The 903 Pad Remediation project including fugitive particulate matter emissions related to soil excavation, handling, and compaction. In addition, wind erosion to exposed areas and stockpiles as well as contaminated soil hauling activities are included.

The Division determined that the above source is subject to CERCLA and is exempt from permit requirements per the Rocky Flats Cleanup Agreement signed by EPA and CDPHE in July 1996. However, the filing of Air Pollutant Emission Notice (APEN) is required, since uncontrolled emissions of PM<sub>10</sub> are greater than 1 ton per year in a non-attainment area.

This exemption from permit requirements is issued in reliance upon the accuracy and completeness of information supplied by the applicant and is conditioned upon construction, installation and operation in accordance with this information and with representations made by the applicant or applicant's agents. Specifically, this exemption has been granted provided that the following information is accurate and complete:

- This facility is specifically exempt from permit requirements per the Rocky Flats Cleanup Agreement.

Actual fugitive particulate matter emissions from this source are 9.35 tons TSP per year and 2.25 tons of PM<sub>10</sub> per year as calculated in the Division's preliminary analysis.

Please note that although exempted sources may not need air emission permits, they still are required to meet all applicable standards and regulations of the Air Quality Control Commission. For this source these requirements include, but are not limited to:

- Regulation 8, Part A, Subpart H - National Emission Standards for Radionuclide Emissions Other Than Radon from Department of Energy Facilities.
